dans les plantations cacaoyères

Protégeons la forêt

Les plantes sont les productrices primaires car elles sont le principal point d'entrée du carbone dans la biosphère

## The Organization ECOVERSION

We are aware that our strength lies not, not in words, but through the actions that we do and the initiatives we support. It was in 2022 that our non-profit organization was created to bring KNOWLEDGE to achieve KNOWLEDGE which are very useful for the life and well-being of all.

Mr. Rodolphe GBELE, Consultant trainer in sustainability, is the General Manager of the organization.

“ECOVERSION, your partner for a vision environment of the world»

### Make the difference

ECOVERSION wants to spread a message of hope to achieve a better world. We think a single action can make the difference here, and that in can have effects in the world. Through our actions, our team works every day tirelessly to contribute to the well-being of all. Creating a better world is about achieving strong sustainability, that is, development that meets the needs of the present without compromising the ability of future generations to meet to theirs.

### Fight against CHILD LABOR In cocoa farming

Child labor is a complex issue. The vast majority of cocoa in West Africa is produced by smallholders. Households living in cocoa-growing areas face the realities of rural poverty, such as land scarcity, food insecurity, limited access to quality education, lack of access to clean water, and inadequate health services. Our approach pursues the vision of the ICI (International Cocoa Initiative) foundation by raising awareness of the risks of child labor and forced labor where they exist with the support of partners with a view to respecting human rights and children.

### Agriculture SUSTAINABLE AND SMART Face to climate

Unpredictable weather conditions, shorter growing seasons, droughts, temperature extremes and increased exposure to crop pests and diseases pose challenges. daunting challenges to producers around the world. It is therefore necessary to create resilient and sustainable farms.

### DEFORESTATION Tree planting

Nearly half of the world's forest cover has already been destroyed, and according to a report by Global Forest Watch, these are 12 million additional hectares that are destroyed every year. Trees are a natural climate solution that captures carbon dioxide (CO<sub>2</sub>), preventing it from building up in the atmosphere and warming our planet. Restoration of the forest cover by planting trees and shade trees in the productions is more than necessary.

### Preservation Environment and BIODIVERSITY

While agriculture often has negative effects on biodiversity, it can also have positive effects by integrating the natural habitat into production systems, preserving soil life, etc. Farms are thus better able to cope with the effects of climate change, which helps to ensure better livelihoods for producers.

### Tailor-made training & advice ENCADREMENT

We are a responsible organization with a standard of honesty, integrity, responsibility and transparency in all aspects of our work. We are committed to exercising and demonstrating an appropriate, efficient and rational use of resources, in order to ensure the greatest possible impact.
